

#### Teledyne RD Instruments

# Workhorse Monitor

Direct Reading 1200, 600, 300 kHz ADCP

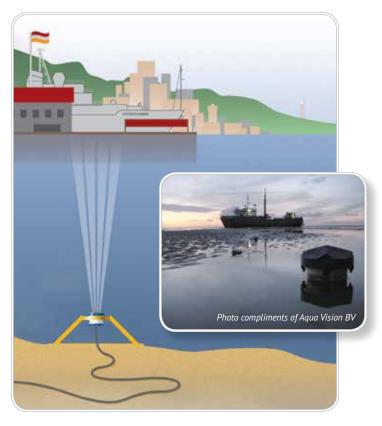

### Real-Time Current Monitoring

The MONITOR is Teledyne RD Instruments' most popular directreading Acoustic Doppler Current Profiler (ADCP). The unit is typically bottom frame-mounted and hard-wired to shore to provide real-time monitoring of coastal currents.

The Monitor's high data accuracy and reliability make it a favorite for deployments in high-volume traffic areas such as ports and harbors, where the data is often integrated into a Vessel Traffic Monitoring System. In fact, the Monitor has been selected for most major port programs undertaken in the United States.

The Monitor offers a choice of three frequencies and ranges, to meet a wide array of data requirements. The unit also offers a flexible upgrade path, which includes an external battery pack, pressure sensor, bottom tracking capability for moving boat applications, and directional wave measurement.

#### **PRODUCT FEATURES**

- Extreme accuracy and reliability: The Monitor is ideally suited for the most demanding environments, including high traffic areas such as ports and harbors.
- Versatility: This direct reading unit can easily be upgraded to tackle a wide variety of coastal applications. Typical upgrades include pressure sensor, external battery pack, bottom tracking, and directional wave measurement—a single instrument can do it all!
- Precision data: Teledyne RDI's Broadband signal processing delivers very low-noise data, resulting in unparalleled data resolution and minimal power consumption.
- A four-beam solution: Teledyne RDI's 4-beam design improves
  data reliability by providing a redundant data source in the
  case of a blocked or damaged beam; improves data quality by
  delivering an independent measure known as error velocity;
  and improves data accuracy by reducing variance in your data.

Dimensions	228.0mm wide x 201.5mm long (line drawings available upon request)							

- 1 User's choice of depth cell size is not limited to the typical values specified.
- 2 Longer ranges available.
- 3 Profiling range based on temperature values at 5°C and 20°C, salinity = 35ppt.
- 4 BroadBand mode single-ping standard deviation (Std. Dev.).
- 5 <±1.0° is commonly achieved after calibration.
